

Exercise 1 - Add New System

⚠ Before you begin this lab module, please make sure you have read the course content for Step 1: Adding a New System.

In this exercise, you will complete the following steps to become familiar with adding an external system:

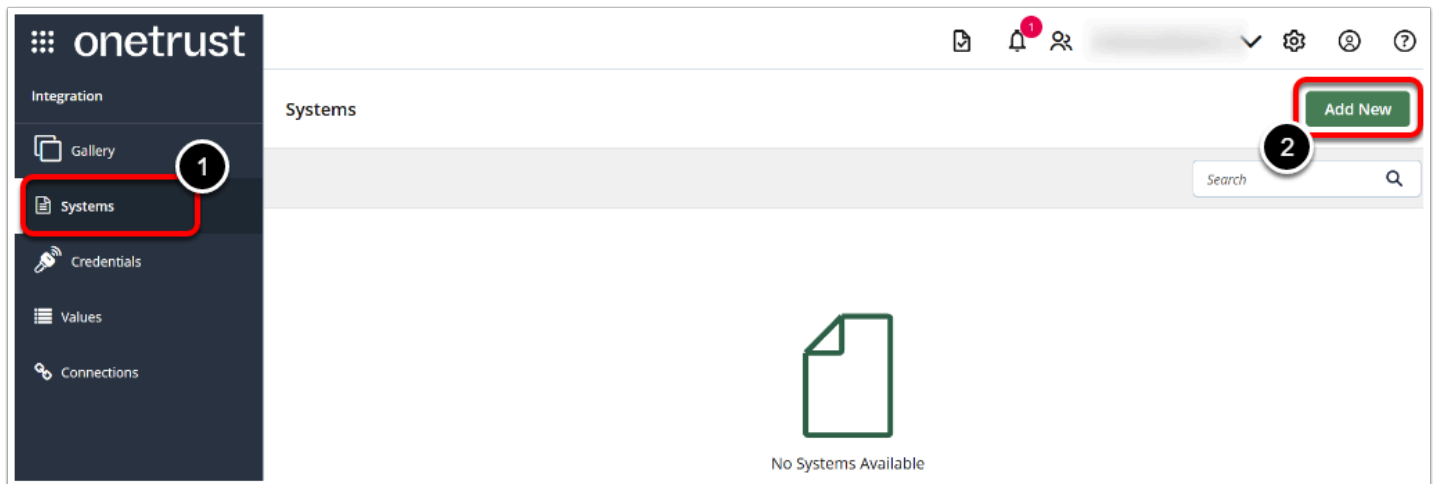

- Add New System
- Create New System

1. Navigate to Integrations

1. Click **Launch Pad**
2. From the **General Apps** section, select **Integrations**

2. Add New System

1. From the **Integration** menu, click **Systems**
2. Click **Add New**

3. Create a New System

Create or Update a System

* Import Type

Create System

* Name

CyberGX

* Description

Integrates with CyberGX

Cancel

Add

The screenshot shows the 'Create or Update a System' dialog box. The 'Import Type' dropdown is set to 'Create System'. The 'Name' field contains 'CyberGX' and is highlighted with a red box and a circled '1'. The 'Description' field contains 'Integrates with CyberGX' and is highlighted with a red box and a circled '2'. At the bottom right, the 'Add' button is highlighted with a red box and a circled '3'.

 **Note:** By default, the **Import Type** (*highlighted in green*) is set to **Create System** when you add a new system.

1. In the **Name** field, type **CyberGX**
2. In the **Description** field, type **Integrates with CyberGX**
3. Click **Add**

 *If applicable*, you have the option to upload a system icon when creating a new system. The icon must be in the file format of PNG, JPG, or JPEG, with a max size of 3 MB.
