

Transcript - Managing Integration Credentials

0:05

To view, edit, or configure your integration credentials, select the Credentials tab from the Integration menu bar.

0:12

Configured credentials are stored as individual rows, including the following fields Credential Name, Connector Type, Authentication Type System.

0:23

Use the search bar located in the top right to search stored credentials by their name.

0:28

You can also filter credentials based on the connector type by clicking on the filter button and then choosing the field from the drop down selection.

0:37

Click the Add New button located at the top right hand corner of the screen to add a new credential.

0:43

The Select System screen appears.

0:46

Enter and select your system from the drop down list, then hit Next.

0:51

The Credential Details screen will display relevant fields and auto populate as many details as available based on your selected system.

0:59

The possible fields you may see on the Credential Details page are Credential Name, Description.

1:07

Add a name and a description to identify your credentials.

1:11

Connector type which includes web app encryption, file share, decryption and Cloud SDK.

1:18

Auth Type includes Basic bearer, Oauth 2.0 API key and custom protocol which is defaulted to HTTPS.

1:29

Host name.

1:30

Enter the default domain of your credential used for workflow actions.

1:35

Test URL.

1:36

Enter an optional REST GET URL for one trust to make a request to the resource to validate a successful system connection.

1:44

Include any default headers required as part of the authentication process.

1:49

Grant type, access token URL, client ID, client secret, and scope fields will be prompted if the connector type selected is Web APP and the auth type is Oauth 2.0 token.

2:02

Add a value here if a static token is required.

2:06

If a token is not provided, One Trust will attempt to generate a token using the access token URL provided.

2:14

One Trust also supports MTLS and server certification chain configurations for an additional layer of security.

2:21

If you choose to do so, other relevant fields such as server name and port number will be prompted based on the selected connector type.

2:30

Once all required fields on the Credential Details page are filled out and you're satisfied with your configurations, hit the Save button located at the bottom right of the page.

2:40

If the credential is successfully saved, you will be redirected to the Credentials main page.
